# David Beats Goliath. Again.

## Data Design's Financial Software Packages Top Datamation Survey...

The results of the latest *Datamation* software survey have been released. They make interesting reading. Especially if it's your job to secure financial applications software packages for your company.

*Average overall customer satisfaction*

In the ratings of General Accounting packages, Data Design's Fixed Assets and Accounts Payable/ Purchase Control finished above all other mainframe financial applications packages studied. Ahead of *all the systems* from MSA, McCormack & Dodge and Software International. Our General Ledger and Capital Project Management Systems were too new to be included in the survey. We're dedicated to achieving the same results with these systems.

Data Design was rated higher in terms of overall satisfaction with product performance as well as service and support. The service and support ratings are especially significant in that they polled user votes in the categories of vendor responsiveness, training and documentation—areas critical to trouble-free system operation. Data Design has consistently been rated the best in these categories in nationally recognized independent software surveys, and accordingly, finance and accounting managers at hundreds of major corporations have found they can rely on our financial software systems.

Our reputation for excellence has been built on years of providing the highest quality mainframe software for:

- ☐ **General Ledger Financial Control**
- ☐ **Accounts Payable/Purchase Control**
- ☐ **Fixed Asset Accounting**
- ☐ **Capital Project Management**

To learn how these systems work for a broad range of medium to large size companies on most major computer systems, call today at 800-556-5511 (408-730-0100 in California), or complete and mail the coupon below. If you do, next year you'll be able to rate your software vendor "number one," too.

# *"The Cullinet Financial System is a major advance in application software technology."*

—Ed Blumstein*

*Ed Blumstein is Cullinet's Manager of Financial Applications Software Development and has directed Cullinet's rapid entry into this field. He joined Cullinet in 1981 with experience in database and applications software. Ed holds a B.A. in Economics from Brown University and an M.B.A. in Finance from Boston University.

## Because it is the first financial system designed for both financial and data processing professionals.

The Cullinet Financial System is a functionally complete online accounting and reporting system that provides financial management with extensive control over financial planning and operations. The system, which includes the modules: General Ledger, Accounts Payable, Accounts Receivable, Purchasing, Order Entry and Fixed Assets, provides a new level of control. This level of control is made possible through the Cullinet Financial System's horizontal and vertical integration with Cullinet's Database Software.

Horizontal integration means that all financial data is controlled and accessed directly from Cullinet's IDMS/R database management system. So, for example, a single vendor record is available to Purchasing and Accounts Payable, whether cutting a purchase order or writing a check. Thus, you are assured that the vendor information is consistent throughout all systems. The Financial System is also integrated with Cullinet's Manufacturing System in the same way.

Vertical integration means that the financial system is designed and developed using IDMS/R and ADS/OnLine, Cullinet's fourth generation programming productivity tool. This unique architecture provides data processing with the means to tailor and modify the system. Since you don't want to change your business to match the functions of the software package, Cullinet provides the tools to tailor the software to meet your business requirements.

The combination of horizontal and vertical integration means, for the first time, a financial system is available that meets the requirements of both data processing and financial management.

Attend an informative seminar explaining this integrated financial system. To participate in one of the 700 Cullinet seminars scheduled internationally, send in the coupon or call 1-800-225-9930. In MA, 617-329-7700.

# You can advertise your product in 40 computer publications in 25 foreign countries—with one phone call.

**There's a market for your product abroad.**
You can reach the right people in the major computer markets throughout the world. The people who make the buying decisions—in countries already importing more than $3 billion in computer hardware, software and supplies.

CW International Marketing Services gives you one, efficient source for direct contact with the leading local computer publications in the world's major computer markets. How can we do this for you? We have a wide network of editorial offices around the world and provide first hand marketing information to our clients. Plus, we have over 10 years experience in the publishing industry.

We're a division of CW Communications/Inc., publishers of *Computerworld* and the world's largest publisher of computer-related newspapers and magazines.

**CW International Marketing Services makes it easy.**
We'll translate your ads for you and give you production services to meet the specifications of any or all the newspapers and magazines we publish or represent—and—we'll even bill you in dollars. What's more, when you place your advertising through CWIMS, you save the V.A.T. (value-added tax). It's as easy as advertising in your local publications.

We'll even help you with market facts, and, in the case of the People's Republic of China, we can arrange for you to give product and marketing seminars there! You can run your ads in our periodicals in these countries:

| | | | | | |
|---|---|---|---|---|---|

## General Ledger & Financial Reporting

The Global General Ledger and Financial Reporting System is operating worldwide in almost every industry. The success of the system, is based on the system producing results when needed and in the format desired, giving management the necessary information for making more informed and timely decisions. The significant features include: • On-Line Data Entry and Inquiry with full validation and audit trails • Flexible account number allowing up to 24 alpha numeric characters • Quick Close allowing the accountant to make last minute adjustments real-time and view the results immediately • Currency Conversion • Real-Time Reporter which provides real-time development, execution, inquiry and review of financial reports (as current as the most recent transaction) • Profit Planning & Forecasting which provides both real-time and off-line forecasting methodologies plus real-time inquiry and adjustment of the results • GLOBELINK™ a mainframe to micro link • Cost Allocations • Flexible Budgeting • Real-Time Color Graphics • UNICALC™ an electronic spreadsheet for the mainframe with a direct interface to the Ledger. The General Ledger offers complete integration with all other Global Financial Control Applications.

**Operating Environment:** IBM 360/370, 43XX, 30XX, DOS/OS/VSE/CICS
IBM System 34/36/38

## Accounts Payable

The Global Accounts Payable System provides financial management with tools to control the company's cash. It will never let a discount be missed or a finance charge be billed to your company.

The significant features include: • On-Line vendor and voucher control • Automatic calculation of discounts • QUICK CHECK™—A real-time check writer • Multi-company facility • Multi-bank processing • Material price variance accounting • Standard and contract payments • Automatic creation of reversing entries for voids • Duplicate invoice checking • 1099 reporting • Cash management reporting • Automatic integration with General Ledger, Purchase Order and Integrated Cost Control Systems.

**Operating Environment:** IBM 360/370, 43XX, 30XX, DOS/OS/VSE/CICS
IBM System 38

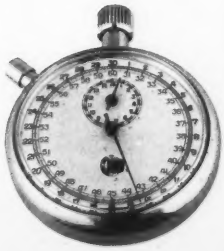
## Integrated Cost Control

Budgeting and standard cost procedures provide a manufacturing company with a set of tools for controlling costs that are effective instruments for quickly revealing departures from what had been planned or expected. The Global Integrated Cost Control System allows management to immediately inquire of conditions that are causing a variation of performance.

This fully interactive management control system provides: • Efficient on-line networking of changes in material, variable converting, and fixed costs • Real-Time simulation of the effect of changes in production costs • Automatic calculation of earned production credits for work-in-process and finished goods • Automatic calculation of the standard material, variable and fixed cost of sales by product line • Full integration of the cost of production and sales with the General Ledger • Real-Time "push down" product planning, i.e., planned units at the finished goods level can be imploded into demand on purchased materials and sub-assemblies • "Quick Clone" offers a facility to mass produce similar product costs.

**Operating Environment:** IBM 360/370, 43XX, 30XX, DOS/OS/VSE/CICS
IBM System 34/36/38

## Accounts Receivable



The Global Accounts Receivable System gives management the ability to analyze customer accounts, control cash allocation and provides all the necessary tools for credit management. The System features include: • Real-Time customer, company and salesmen file maintenance and inquiry • Extensive inquiries of open item and paid open item history • Real-Time cash receipts entry • Real-Time posting of all transactions with complete audit trails • Detail and summary aged accounts receivable schedule • Customer statements • Dunning letters • Automatic calculation of service charges • Full integration with General Ledger and all other Global Financial Control Systems.

**Operating Environment:** IBM 360/370, 43XX, 30XX, DOS/OS/VSE/CICS
IBM System 38

## Purchase Order

In today's increasingly cost conscious world management is continually searching for systems and methods to provide a higher level of control over disbursement of company funds. Much time and effort are devoted to the establishment and maintenance of sound purchasing procedures and controls. Global recognizes the critical need for a reliable, efficient, real-time purchase order system in the overall financial planning scheme. The major highlights of the Global Purchase Order System include: • Interactive billing and receipt matching • Immediate order printing • Real-Time analysis and correction • On-Line inspection and quality control • Full real-time validation • Expense and budget control • Vendor performance analysis • Real-Time forecasting of commitments • Automatic interface with General Ledger and Accounts Payable.

**Operating Environment:** IBM 360/370, 43XX, 30XX, DOS/OS/VSE/CICS
IBM System 38

# *"The Cullinet Manufacturing System is a major advance in application software technology."*

—Fred Buckley*

## Because it is the first manufacturing system designed for both manufacturing and data processing professionals.

The Cullinet Manufacturing System is a net change, closed-loop MRP-II system. It is an online, interactive system that provides manufacturing management with an effective way to plan and react to real world changes in the manufacturing cycle, from master schedule to finished product. The system, which includes eight functional modules: Bill of Materials, Material Requirements Planning, Inventory, Shop Floor Control, Master Production Scheduling, Purchasing, Cost Control and Order Entry, provides a new level of control that can dramatically increase productivity.

This level of control is made possible through the Cullinet Manufacturing System's unique horizontal and vertical integration with Cullinet's Database Software.

Horizontal integration means that all manufacturing data is controlled and accessed directly from Cullinet's IDMS/R database management system. For example, when you issue material from inventory, the system automatically updates inventory balances, allocates the quantities to Shop Floor Control and converts the units to dollars for Cost Control. Additionally General Ledger Accounts are updated because the Cullinet Manufacturing System is completely integrated with Cullinet's Financial System.

Vertical integration means that the manufacturing system is designed and developed using IDMS/R and ADS/OnLine, Cullinet's fourth generation programming productivity tool. This unique architecture provides data processing with the means to tailor and modify the system. Since you don't want to change your business to match the features of a software package, Cullinet provides the tools to tailor the manufacturing system to meet your company's requirements.

The combination of horizontal and vertical integration means, for the first time, a manufacturing system is available that meets the requirements of both data processing and manufacturing management.

Attend a productive seminar explaining this integrated manufacturing system. To participate in one of the 700 Cullinet seminars scheduled internationally, call 1-800-225-9930. In MA, 617-329-7700.

**Fred Buckley is Cullinet's Manager of Manufacturing Applications Software Development. His efforts have been crucial in achieving the integration that makes Cullinet's manufacturing system unique. Fred joined Cullinet in 1977. Fred holds a degree in Computer Science from Thames Valley State and is a member of the American Production and Inventory Control Society.*

# *"In your development center, ADS/OnLine will increase productivity and reduce your company's applications backlog."* —Don Heitzmann*

## Using ADS/OnLine Cullinet created the best applications software ever built.

The Application Development System, Cullinet's fourth generation language, became available in 1981. ADS/OnLine was the key element in our database software system needed to address the application software business in a whole new way. We set out to develop advanced financial and manufacturing applications; applications designed in the 1980's all built using this fourth generation language. Today, Cullinet offers the finest financial and manufacturing applications available, featuring both horizontal and vertical integration. Horizontal integration means that all applications share a common database so redundancies and inconsistencies are eliminated. Vertical integration means all applications are built using ADS/OnLine and advanced database technology so they are easier to install, tailor and maintain.

Using ADS/OnLine, we developed advanced applications much faster than if we used traditional methods. In your development center, ADS/OnLine can increase productivity and reduce your company's backlog.

ADS/OnLine eliminates up to 70% of the lines of code in a typical COBOL program. This can result in a dramatic increase in programmer productivity. In addition, ADS/OnLine is easily learned by COBOL programmers, so your programming staff can become more productive in less time.

Applications can be built more efficiently with ADS/OnLine because it is a non-procedural language. The developer simply paints the screens on a terminal and fills in the blanks to define the applications program. Plus, automatic editing and automatic error handling detect input errors with no code written at all. And the complete integration of ADS/OnLine, with all Cullinet database facilities, not only ensures control over the application development function, but also guarantees the performance necessary to run these applications in day-to-day operations.

ADS/OnLine has been a key to our success in applications software. It could do the same for you in establishing new information systems and eliminating your applications backlog in the 1980's and 1990's.

Attend a comprehensive seminar explaining this advanced fourth generation language and Cullinet's other database software products. To participate in one of the 700 Cullinet seminars scheduled internationally, call 1-800-225-9930. In MA, 617-329-7700.

**Don Heitzmann is Cullinet's Director of System Software Development. Don joined Cullinet seven years ago. His early efforts were in design and development of IDMS-DC and he is now responsible for the complete IDMS database product line. Don is a graduate of Princeton University with a B.S. in Electrical Engineering and a Masters in Architecture.*

# Index to Manufacturing, Banking, Insurance And Order Processing Applications Software

This tab section includes the Manufacturing, Banking, Insurance and Order Processing/Billing software categories. The Manufacturing section includes the following product types — Bill of Materials (BOM), Inventory Control (Inv. Cont.), Job Costing, MRP, Numeric Control (Num. Cont.), Process Control (Proc. Cont.), Production Control (Prod. Cont.), Shop Floor Control (Shop Cont.) and Integrated Manufacturing (Int. Manf.) software. The Banking section contains the following software categories — Automatic Teller Machine (ATM), General Banking (Gen. Bank.), Commercial Banking (Comm. Bank.), Credit Union (Cred. Unions), Electronic Funds Transfer (EFT), Savings and Loan (S&L), Trust Fund (Trust) and Integrated Banking (Int. Bank.). The Order Processing category includes Billing (Bill.), Invoicing (Inv.), Order Processing and Sales Analysis (O/P-Sales), Order Entry (O/E), Order Processing (O/P), Sales Analysis (Sales), Utility Billing (Util. Bill.) and Integrated Order Processing and Billing (Int. O/P-Bill.). The Insurance section is all-inclusive.

The products have been indexed by major operating system: each section contains those packages which run on a specific operating system or operating system family. Index entries contain information on the vendor, package name, the product type and the page number on which the complete product listing can be found.

# Computerworld presents the three most important factors in creating the #1 specialized business publication in the United States:

**Factor 1**

**Great Editorial.** When you ask $44 a year for a subscription — the editorial better be worth it. Ours is. Because we hire journalism skills first and computer industry background second. Our writers instinctively recognize the lead in a story. They can smell another story when they haven't even completed the one they're working on. They know how to interview; how to get the source to reveal facts that never were intended to be released.

**Factor 2**

**Great Editorial.** Our writers are pros at giving our readers what they need because they go where our readers are. They go to the same seminars, conferences, manufacturers' training programs and trade shows. And they don't just listen with our readers — they listen to them. So our readers get responsive editorial. And they regularly vote *Computerworld* "most useful publication" — both in our own studies and in those done by independent organizations.

**Factor 3**

**Great Editorial.** Because *Computerworld's* editorial department is supported by subscription revenue, our writers know who they're working for. They write the stories our readers need to see — independent from our advertising. And our advertisers appreciate our reputation for editorial integrity as much as our readers do.

**Editorial.** It's the most important factor in developing *Computerworld* as the #1 specialized business publication in the U.S. And you'll find that our sales people know as much about our readers and our marketplace as our writers do. They'll be happy to give you the facts, the numbers and a first-class overview of the marketplace. Just call Don Fagan, Vice President, Sales at 1-617-879-0700.

# We've put ourselves in your place.

We've been there too. You ask for information and nobody can find it. Because it's in someone's mind. In someone's file. Or written on someone's lunch bag.

That's why you need us.

ASK puts complete, integrated manufacturing and financial information where you need it. At your fingertips. And we'll do it sooner than anyone else.

Fact is, in this field, we're the biggest. We specialize in nothing but software and systems for manufacturers. So we understand your problems.

And your people. We've designed our MANMAN® system so everybody from the loading dock to the legal department can learn it. And use it to give you instant answers instead of sending you to data processing. So when you ask, you'll get told what, when, where and how much. Not where to go.

Don't handle the information burden alone. Call Carol Singh at (415) 969-4442. Or write ASK, Department C, 730 Distel Drive, Los Altos, California 94022.

We'll be glad to put ourselves in your place.

# "We can eliminate your data entry problems... I guarantee it!"

Robert L. Ableman
President, International Software Technology, Inc.

## Now you can drastically cut your data center costs and dramatically improve your efficiency!

International Software Technology introduces ODE, a major breakthrough in on-line data entry software. It's by far the most advanced product on the market today.

ODE's low resource requirements (only 40-K resident storage), full menu drive, and "Subsecond Response" time are unequaled by any other product in the data entry arena. And ODE makes it easy for you to distribute some or all of your data entry to the departments actually responsible for creating the source documents. End users (with no computer training) can learn to enter, verify and correct data in no more than a few hours.

I unconditionally guarantee you will get more data entered faster at lower cost and with greater accuracy, using ODE! If not completely satisfied, you can return it for a full refund for up to three months after purchasing or leasing.

ON-LINE DATA ENTRY™ SM

# InSci

## For Human Resource Management

## Information Science the Single Source . . .

**Personnel**
Now you can leverage your most costly resource from resume to retirement while providing management with the cost savings and the answers they need for both time critical issues and strategic planning.

**Payroll**
InSci's system streamlines all phases of the payroll process from check generation through tax reporting with increased ease, flexibility and control.

**Pension**
InSci's Pension Administration System lets you administer all phases of pension planning while providing on-line, real-time employee quotations for counseling and making government compliance and accurate, quarterly reporting quick, easy and accurate.

**Claims**
InSci's Claims Processing System now makes it possible for your company to self-fund and self-administer any combination of health, dental and disability coverage for dramatic bottom-line savings.

**Decision Support**
InSci's Decision Support System puts you in control of your information, giving you the answers to all your questions when you need them and in the format that you define, from charts and graphs to detailed reports.

Using InSci's total approach to Human Resource Management you can finally strategically manage your most valuable resource and save. Send for our free literature today or call Christine Hanavan (201) 391-1600 Information Science Incorporated, 95 Chestnut Ridge Road, Montvale, N.J. 07645

Why InSci?

# Index to Payroll/Personnel And Office Automation Software

This tab section includes the Payroll, Personnel, and Office Automation software categories. Within the Office Automation section of the tab, Word Processing/Text Editing, Electronic Mail (E-Mail) and general OA products can be found. The products have been indexed by major operating system: each section contains those packages which run on a specific operating system or operating system family. Index entries contain information on the vendor, package name, the product type and the page number on which the complete product listing can be found.

# A sure cure for the problem of information bottleneck.

Programming backlog is the source of the problem. Eliminate it, and you eliminate the bottleneck.

Which is precisely what Sperry has done with the MAPPER™ System.

With MAPPER, you work with the computer directly. You ask questions in plain English. And you get immediate answers.

And if the information you get raises other questions, you can ask them right away. With no delay for programming. Or reprogramming.

MAPPER is that powerful. It allows you to manipulate information in almost any way you want. And, interesting to note, it can even help your programmers become more productive.

## AN AFFORDABLE SYSTEM.

You don't have to be a large company to have a MAPPER System. MAPPER can be scaled to the real and present needs of just about any size company. The cost of a MAPPER System makes it practical for even a department within a company to own its own system. Or you can time-share through a Sperry service bureau.

What you get for your money is a whole new order of efficiency in your day-to-day management tasks. Because you'll have the information you need right at your fingertips. Literally.

## SEEING IS BELIEVING.

We've made some promises here that may sound extravagant. But if anything, our claims are on the conservative side. And to prove it, we offer you the opportunity to see a demonstration of MAPPER at work.

## 800-547-8362

But first, you might want to look over our MAPPER brochure. A copy is yours for the asking. Call toll-Free: 800-547-8362 (9 a.m. to 5 p.m. E.S.T.). Or send us the coupon.

# Madicare™. To insure a healthy manufacturing software implementation.

If you're looking at manufacturing software, you already know the implementation process can be a traumatic experience.

That's why we created the Madicare program. And made a company-wide commitment to it. Which is why we provide a complete spectrum of support services.

With Madicare, you and your staff can manage your new system transplant without disrupting your business or frustrating your employees.

And with implementation successes in both discrete and process industries, Madic Corporation is the most successful software company in the business. Which says a lot.

M[illegible] of the credit rightfully goes to The Madic System, itself. This highly adaptable, integrated manufacturing software is designed for people. To speak their language. To readily adapt to their existing procedures. To provide up-to-the-minute information so they can do their jobs more efficiently.

So if you are looking for software — from a basic MRP system to a closed-loop corporate information system — call our toll free number, 800-821-2799. Inside California, call 800-354-4083. We'll answer all your questions. And you'll begin to see why we are the leader in successful system implementation, nationwide. Madic Corporation, 3960 Freedom Circle, Santa Clara, CA 95054 Phone: 408-988-8311.

## TheMadicSystem

**The only corporate information system you'll ever need.**
